

GATE 1

L-Gi Gate

Lookout · Annupuri

01

INTERMEDIATE TO ADVANCED

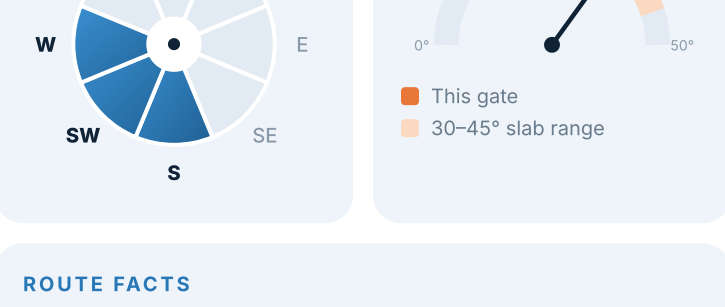

ANNUPURI

SINGLE LINE

DISTANCE 1.9 km	VERTICAL DROP 550 m
SLOPE ANGLE 30–40°	EXPOSURE Medium

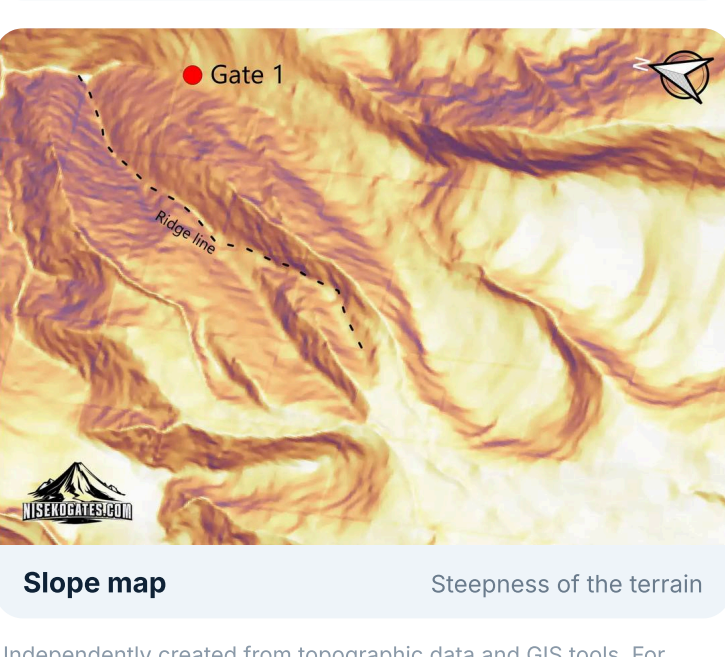

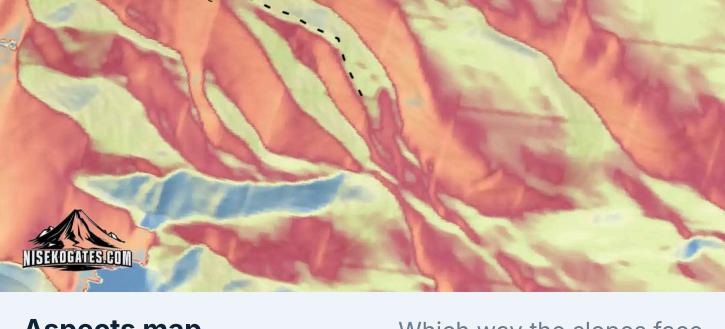

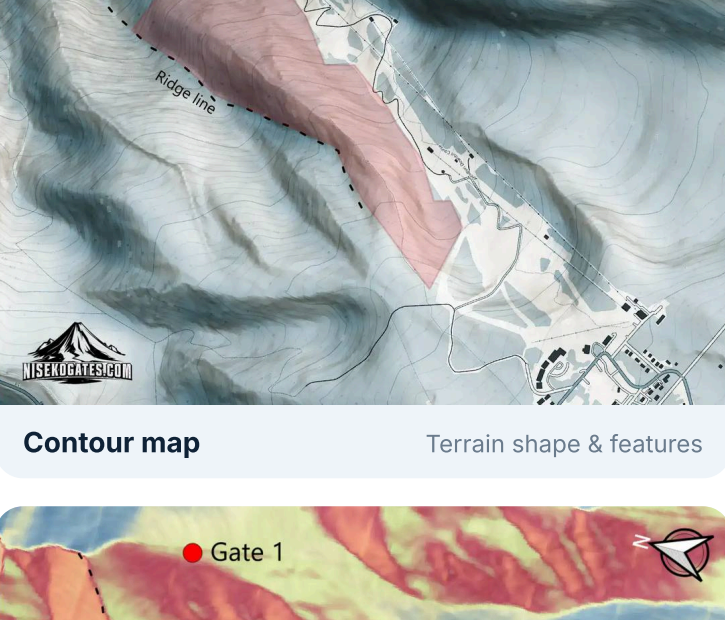

A wide face with smooth, rolling terrain that gradually opens up as you descend.

Occasional wind lips form natural drops and playful transitions, making it ideal for flowing turns into the open forest.

ROUTE FACTS	
Location	Annupuri
Access	Jumbo #4 Pair Lift
Entry type	Skiing
Exit type	Skiing
Line options	Single line
Return	Annupuri base

Maps

Independently created from topographic data and GIS tools. For reference only — not a substitute for official avalanche forecasts or navigation tools.

The gate

GATE OVERVIEW

Drop in to skier's right, a little below the top of the Annupuri lifts, into the Osawa Bowl: west-facing slopes, spaced trees and broad powder fields. The line funnels naturally and finishes in a gully that leads back to the base.

TERRAIN FEATURES

A wide-open west to south-west facing bowl with playful gullies, smooth rolling terrain and scattered open-forest sections. Natural wind lips create small drops and flowing transitions.

- HOW TO GET IN / OUT**
- IN

Accessed from the Annupuri Jumbo #4 Pair Lift, descending toward the base of Annupuri.
- OUT

Exit via the end of the gully on skier's left.

- EXPERT TIPS

➤ Enter early on clear days to beat the wind.

➤ Stay high on the traverse for an easier return.

GATE 2

02

Annupuri Peak

Annupuri

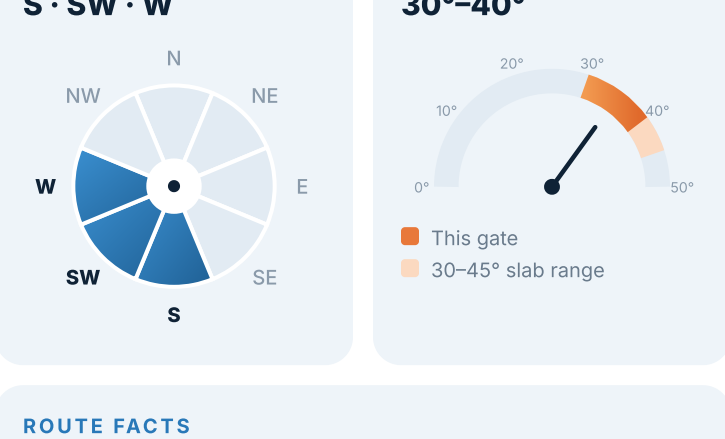

ADVANCED TO EXPERT

ANNUPURI

MULTIPLE LINES

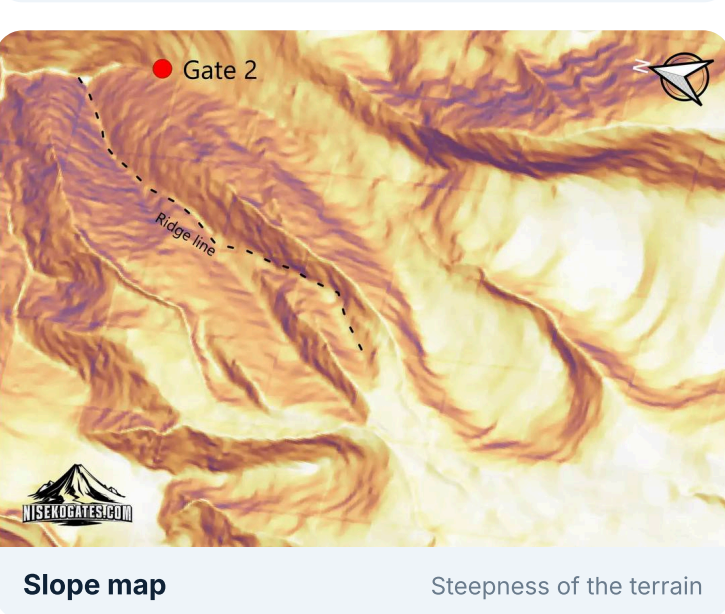

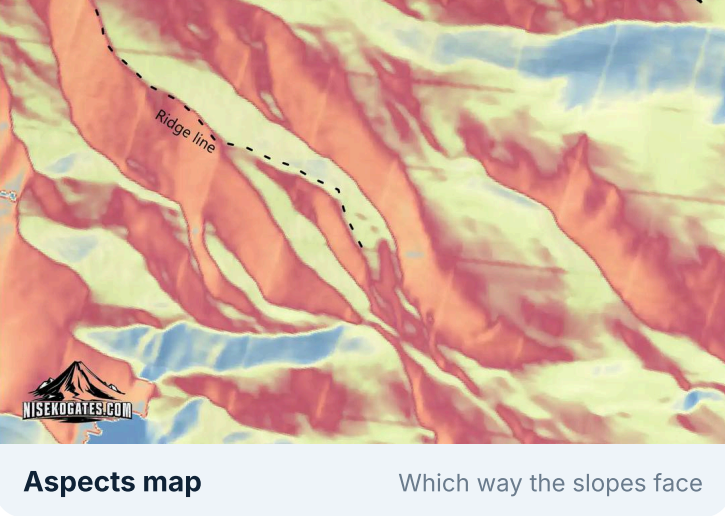

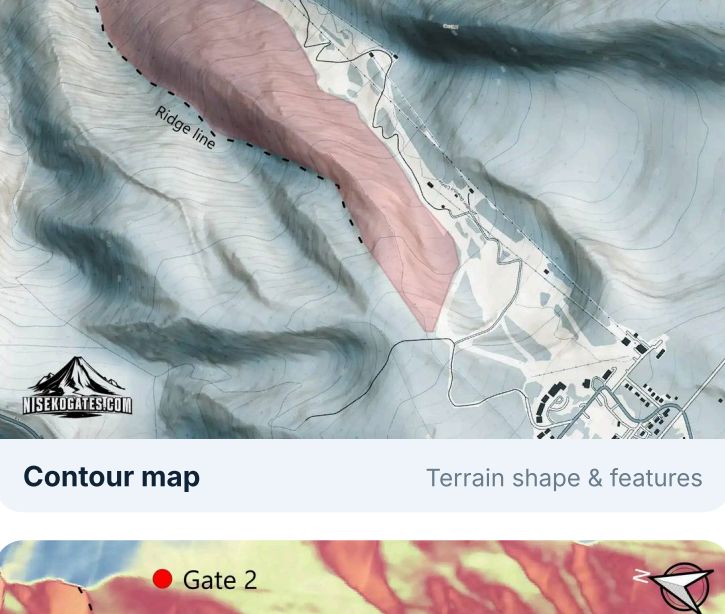

DISTANCE 2.5 km	VERTICAL DROP 760 m
SLOPE ANGLE 30–40°	EXPOSURE High

Direct access from the Annupuri peak into wide-open alpine terrain with some of the longest, most flowing lines in Niseko. Incredible on a clear powder day — but highly exposed and genuinely dangerous when visibility is poor or avalanche conditions are elevated.

ROUTE FACTS	
Location	Annupuri
Access	Annupuri top lift + bootpack
Entry type	Hike
Exit type	Skiing
Line options	Multiple lines
Return	Annupuri base

Maps

Independently created from topographic data and GIS tools. For reference only — not a substitute for official avalanche forecasts or navigation tools.

The gate

GATE OVERVIEW

Direct access into exposed alpine terrain with multiple flowing line options descending from the Annupuri peak. Wind-transported snow often creates deep powder deposits, while changing weather and visibility can quickly increase the seriousness of the terrain.

TERRAIN FEATURES

A wide, fully exposed open alpine bowl with steep pitches, prominent cornices along the upper ridges, potentially wind-loaded slopes and very few trees for anchors or reference. Classic high-alpine terrain that looks amazing but carries serious avalanche hazard.

- HOW TO GET IN / OUT**
- IN

Bootpack left from the Annupuri top lift for 5–15 minutes to reach the main terrain, or continue 20–40 minutes to the summit for longer alpine descents.
- OUT

Most routes finish by skiing back toward the Annupuri base area, exiting skier's left.

- EXPERT TIPS**
- Enter only if visibility and avalanche conditions are stable.
 - Start early, before the wind affects the snow.
 - Stay high for better return options.

GATE 3

Hirafu Peak

Grand Hirafu

ADVANCED TO EXPERT

GRAND HIRAFU

MULTIPLE LINES

DISTANCE

1.3–2.8+ km

VERTICAL DROP

520–840 m

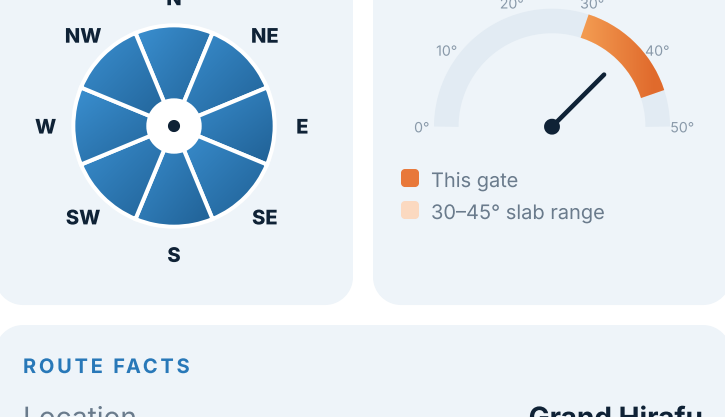

SLOPE ANGLE

30–45°

EXPOSURE

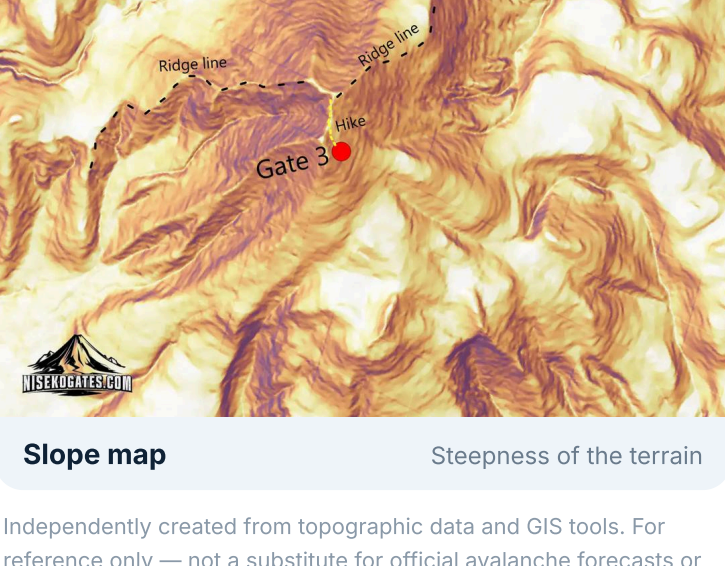

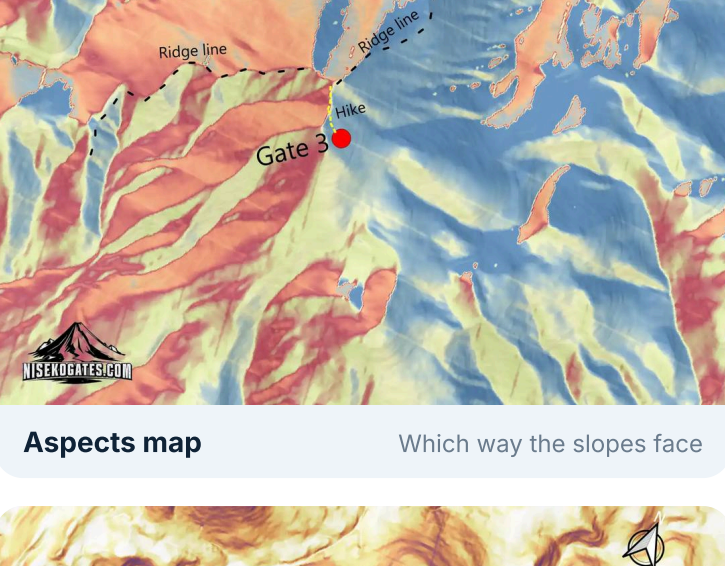

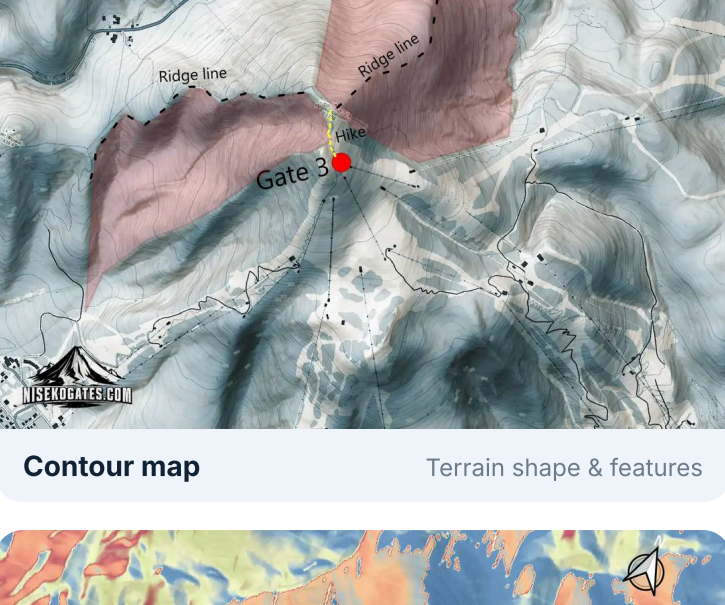

High

One of Niseko's most iconic gates: sustained steep terrain, wind-shaped features and consistently deep powder during storm cycles.

ROUTE FACTS	
Location	Grand Hirafu
Access	King #4 Chair + hike
Entry type	Hike
Exit type	Skiing / Hike
Line options	Multiple lines
Return	Annupuri or Hanazono

Maps

Independently created from topographic data and GIS tools. For reference only — not a substitute for official avalanche forecasts or navigation tools.

The gate

GATE OVERVIEW

Opens from the summit of Hirafu and gives access to a wide range of freeride lines into East Ridge, the North Face and the Back Bowl. Long fall-line descents, wind-loaded terrain and technical route choices reward experienced riders in storm conditions.

TERRAIN FEATURES

Steep alpine faces, wind-loaded slopes, narrow chutes and wide-open powder fields. The upper section is fully exposed with no trees, with variable snow shaped by wind and temperature, before transitioning into more sheltered terrain lower down.

- HOW TO GET IN / OUT**
- IN

Hike from the top of the King #4 Chairlift to the summit.
- OUT

Depending on your line, descend toward the Annupuri base area, or traverse and hike toward the middle or lower Hanazono zones.

- EXPERT TIPS**
- Access only in clear weather — expect complex terrain, heavy wind loading and rapid snowpack changes.
 - Carry full avalanche equipment and know how to use it.
 - Have a clear plan for your line before entering the zone.

The gate

GATE OVERVIEW

A quick traverse gives easy access to the lower East Ridge beneath Hirafu Peak: powder fields, flowing gullies and smooth fall-line descents toward Hanazono. Despite the short approach, the zone sits beneath active avalanche terrain from the upper ridges, so timing and snowpack awareness are essential.

TERRAIN FEATURES

Open bowls, natural gullies, ridgeline cornices and occasional small drops make for playful yet technical terrain. The upper section is fully open with no trees, offering broad visibility and clean lines before more defined features lower down.

HOW TO GET IN / OUT

IN

Enter directly from the top of the King #4 Chairlift.

OUT

Early exits traverse back toward the Hanazono #3 lift; lower lines finish on a cat track followed by a roughly 15-minute hike back into the resort.

EXPERT TIPS

- Ideal on deep powder days thanks to the minimal approach.
- Stay high on the traverse to keep momentum and limit exposure to the steeper slopes above.
- Smart line choice and efficient movement keep you safer and on the best snow.

Slope map

Steepness of the terrain

Independently created from topographic data and GIS tools. For reference only — not a substitute for official avalanche forecasts or navigation tools.

— The gate

GATE OVERVIEW

Just above the Hanazono #3 lift, this lower-altitude gate offers mellow open powder lines, well-spaced trees and gentle gullies that add flow and variety. Perfect for early tracks on storm days and an easy, confidence-building introduction to backcountry freeriding.

TERRAIN FEATURES

Open powder faces with spaced trees, wind-loaded cornices above the traverse lines, and playful ridges and gullies that become more defined lower down. Exposure up high and smoother terrain below make it a versatile zone.

HOW TO GET IN / OUT

IN

A short one-minute hike above the Hanazono #3 top station.

OUT

Early exits return toward the Hanazono #3 base; lower exits need a 15-minute hike back to the resort via the cat track.

EXPERT TIPS

- Perfect for first tracks and quick powder laps.
- Stay close to the lift line for the easiest, fastest return and stack multiple runs.

Aspects map

Which way the slopes face

Slope map

Steepness of the terrain

Independently created from topographic data and GIS tools. For reference only — not a substitute for official avalanche forecasts or navigation tools.

The gate

GATE OVERVIEW

From the top of the Moiwa Quad Lift, Gate 6 opens into rugged side-country terrain connecting Moiwa Bowl, Mikaeri-no-sawa and the western Anbetsu area. Steep technical lines, exposed alpine features and remote descents demand careful route selection and long exits.

TERRAIN FEATURES

Open alpine faces, cliff bands, creek walls, natural half-pipes, steep chutes and wind-loaded ridges with very little tree cover. Lower down: sculpted gullies, creek run-outs and technical traverses toward remote exits and hiking sections.

HOW TO GET IN / OUT

IN

Access starts directly to the right of the top Moiwa lift unload area.

OUT

Returning to the resort requires a long, flat traverse toward skier's right.

EXPERT TIPS

- › Be ready for long traverses after the drop — the exit line often flattens out.
- › Some sections may be non-skiable, requiring skating or short pushes to reconnect with the return route.

The gate

GATE OVERVIEW

Just below the Jumbo Pair Lift #3 loading station, this gate gives quick access to low-angle freeride terrain with open glades, smooth fall-line transitions and forgiving terrain. A popular choice for playful riding and storm-day laps.

TERRAIN FEATURES

Well-spaced gladed trees, subtle rollers, flowing fall-line terrain and natural half-pipe gullies that collect soft snow. With few visual landmarks, the boundary rope is an important navigation reference; creek sections may be exposed early season.

HOW TO GET IN / OUT

IN

From the bottom of Annupuri's Jumbo Pair Lift #3, follow the boundary line on skier's right.

OUT

The terrain naturally funnels back toward the lower Annupuri base area, reconnecting with the resort.

EXPERT TIPS

- Be ready for long traverses after the drop — the exit line often flattens out.
- Some sections may be non-skiable, requiring skating or short pushes to reconnect with the return route.

Low

The lowest entry into the Osawa Bowl: short but enjoyable tree runs, sheltered terrain and reliable powder turns that often stay untouched even on busy days or in poor visibility.

ROUTE FACTS	
Location	Annupuri
Access	Jumbo Pair Lift #3
Entry type	Skiing
Exit type	Skiing
Line options	Single line
Return	Annupuri base

Maps

Independently created from topographic data and GIS tools. For reference only — not a substitute for official avalanche forecasts or navigation tools.

The gate

GATE OVERVIEW

Short but satisfying tree runs that often hold untouched snow even on busy days. Sheltered and forgiving, it's especially valuable when the upper-mountain gates are closed or visibility is too poor to go higher — a reliable fallback in challenging weather.

TERRAIN FEATURES

Tight but well-spaced trees, natural half-pipe gullies and short, punchy runs with limited vertical. Playful and flowy — ideal for quick, fun tree laps when visibility is low or you want fast repeats on consistent snow.

- HOW TO GET IN / OUT**
- IN

From the top of Annupuri Jumbo Pair Lift #3, follow the skier's right ridge to the entrance (below Gate 1).
- OUT

Descend through the trees into the Osawa Bowl and return to the Annupuri base.

- EXPERT TIPS**
- Expect quick laps with smooth flow through the trees.
 - A dependable choice on storm days or in limited visibility thanks to its lower, more sheltered terrain.

GATE 9

Waterfall

Hanazono

09

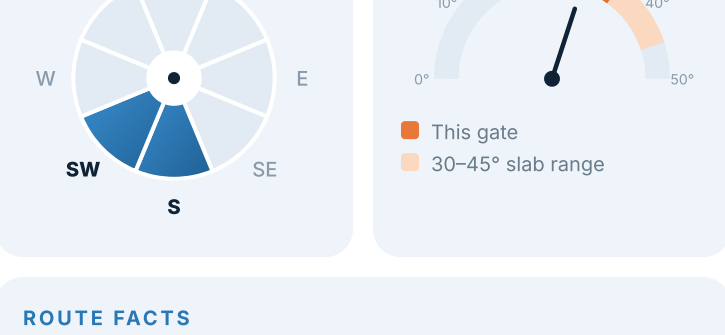

INTERMEDIATE TO ADVANCED

HANAZONO

MULTIPLE LINES

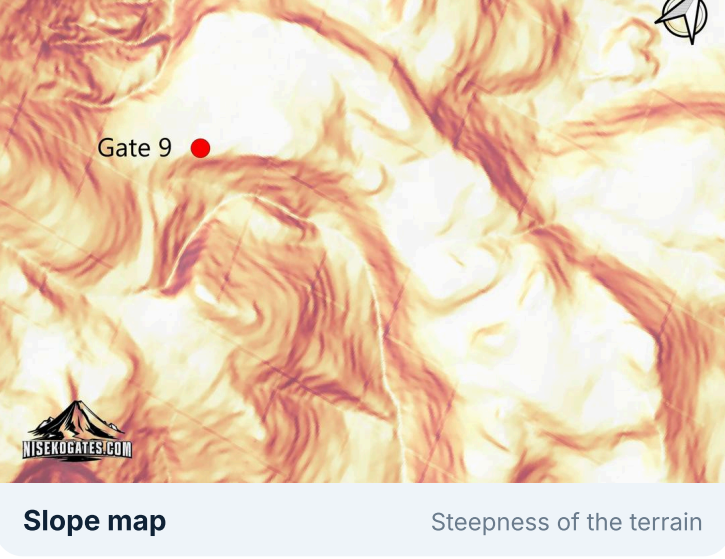

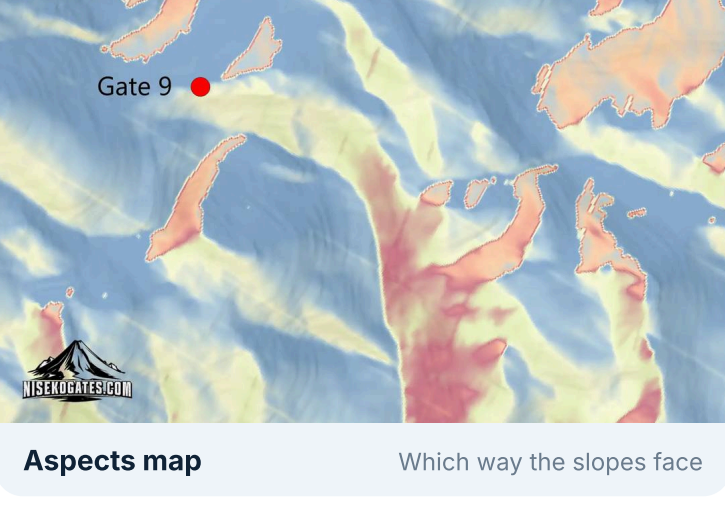

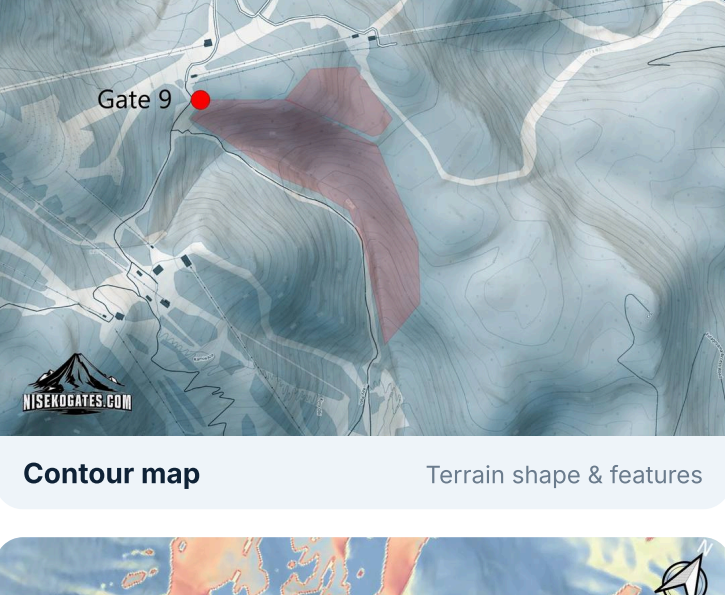

DISTANCE 1 km	VERTICAL DROP 220 m
SLOPE ANGLE 25–35°	EXPOSURE Medium

Playful tree skiing with flowing fall-line terrain, wind-loaded snow pockets and natural rollers leading toward technical creek features.

ROUTE FACTS	
Location	Hanazono
Access	Hanazono #2 top station
Entry type	Skiing
Exit type	Skiing
Line options	Multiple lines
Return	Holiday Run

Maps

Independently created from topographic data and GIS tools. For reference only — not a substitute for official avalanche forecasts or navigation tools.

The gate

GATE OVERVIEW

Between Hanazono 2 and Holiday Run, Gate 9 offers short freeride laps through spaced trees and mellow terrain features with quick access from the resort. More technical lower sections, with creek crossings and terrain hazards, call for careful line choice.

TERRAIN FEATURES

Spaced trees, smooth fall-line flow, wind-blown powder pockets and natural rollers. Lower down the terrain funnels into a creek with irregular transitions, including a small waterfall drop that becomes a serious hazard early season or in deep storm cycles.

- HOW TO GET IN / OUT**
- IN

Just above and slightly skier's left of the Hanazono #2 top station, about 30 m along the route toward Holiday Run.
- OUT

After crossing the river, a short traverse returns toward Holiday Run; going too low may require a hike back out.

- EXPERT TIPS**
- Choose your creek crossing carefully.
 - Crossing early keeps the exit short and easy; going further down the drainage gives a longer run but a harder exit.

GATE 10

Moiwa Sidecountry

Moiwa

ADVANCED TO EXPERT

MOIWA

SINGLE LINE

DISTANCE

1.5 km

VERTICAL DROP

400 m

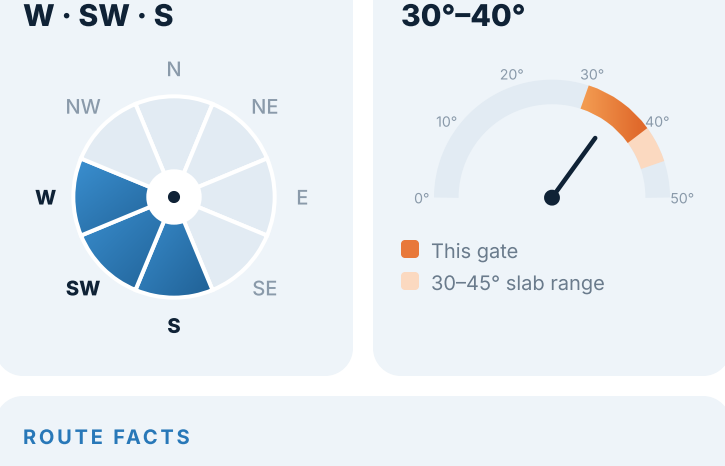

SLOPE ANGLE

30–40°

EXPOSURE

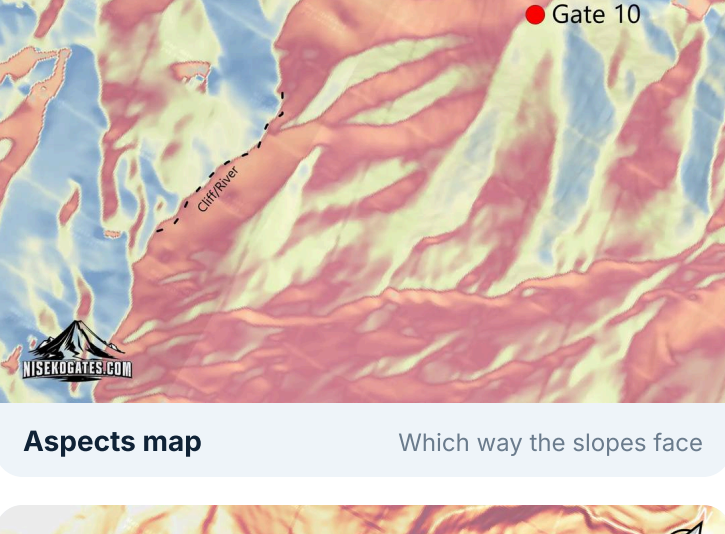

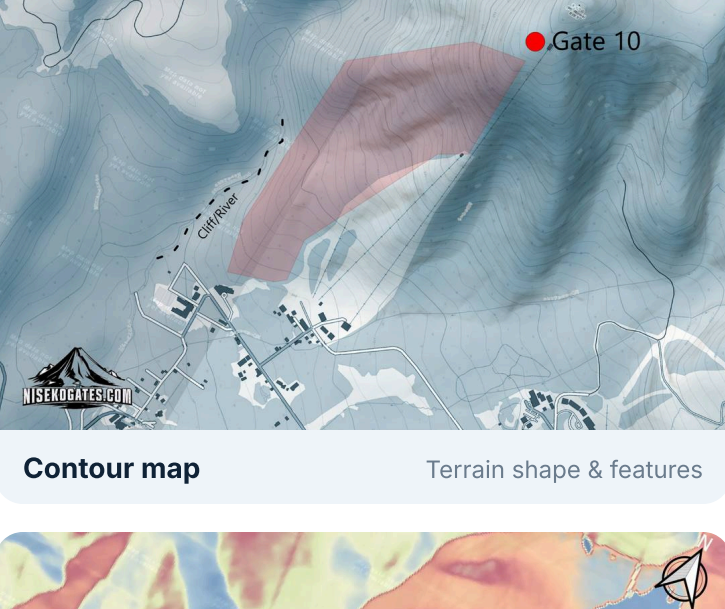

High

Remote freeride terrain with open powder bowls, playful natural features and flowing tree lines on the Moiwa side of Niseko.

ROUTE FACTS	
Location	Moiwa
Access	Moiwa Quad Lift
Entry type	Skiing
Exit type	Traversing
Line options	Single line
Return	Moiwa base

— Maps

Independently created from topographic data and GIS tools. For reference only — not a substitute for official avalanche forecasts or navigation tools.

— The gate

GATE OVERVIEW

Gate 10 opens a more remote skier's-right zone toward Moiwa, combining open bowls, glades and natural features with deep storm snow and fewer tracks. It rewards riders willing to go further, but route choice and speed management are key to avoid long traverses and flat exits.

TERRAIN FEATURES

Open powder bowls, spaced tree glades, natural pillows and drops, and occasional ravine terrain. Lower sections include flatter terrain and mandatory traverses on the exit, so momentum and smart line selection are essential.

HOW TO GET IN / OUT

IN

From the top of the Moiwa Quad Lift, traverse skier's right along the boundary rope to the clearly marked Gate 10 entrance.

OUT

Follow the main fall-line gully, gradually drifting skier's left, to return naturally to the Moiwa base area without long traverses.

EXPERT TIPS

Don't push too far, or you'll end up well outside the natural return lines.

Strong navigation skills are essential, especially in low visibility or deep snow — the terrain funnels away from the resort.

25–40°	High

Niseko Village's only sidecountry gate, with long sustained powder lines, open alpine terrain and flowing freeride descents directly beneath the gondola.

ROUTE FACTS	
Location	Niseko Village
Access	Village Gondola
Entry type	Hiking
Exit type	Skiing
Line options	Multiple lines
Return	Niseko Village runs

— Maps

Contour map

Terrain shape & features

Aspects map

Which way the slopes face

Slope map

Steepness of the terrain

Independently created from topographic data and GIS tools. For reference only — not a substitute for official avalanche forecasts or navigation tools.

— The gate

GATE OVERVIEW

Beside the base of the Wonderland Chair, this gate gives direct access to Niseko Village's main sidecountry. Long fall-line descents, reliable storm snow and varied natural features with minimal flat sections make it one of the best areas in Niseko for continuous freeride laps.

TERRAIN FEATURES

Open alpine bowls, tree glades, wind lips, natural half-pipes and large cornices. Partial shelter from surrounding trees helps preserve snow quality while keeping smooth fall-line flow and scenic open terrain beneath the gondola.

HOW TO GET IN / OUT

IN

From the top of the Niseko Village Gondola, ski to the Wonderland Chair base and follow the short uphill cat track to the Gate 11 entrance.

OUT

The terrain naturally funnels back onto the lower Niseko Village runs, returning directly to the resort.

- EXPERT TIPS
- › Carry full avalanche gear.
 - › Arrive early — strong sun exposure changes the terrain quickly through the day.
 - › Best on overcast days after a storm, when the snow stays colder and more consistent.
